CAM 40

CIVIL AERONAUTICS MANUALS—Volume VI

U. S. Department of Commerce — Civil Aeronautics Administration

Civil Aeronautics Manuals and supplements thereto are issued by the Office of Flight Operations and Airworthiness, for the guidance of the public and are published in the Federal Register and the Code of Federal Regulations.

Supplement No. 2 — **June 1, 1957**

SUBJECT: Revisions to Civil Aeronautics Manual 40 dated April 1, 1956.

This supplement is issued to provide subscribers of Civil Aeronautics Manual 40 with the following revision:

Section 40.51–2 is added to permit the inclusion of takeoff, en route, and landing weight limitations data in a handbook, exclusive of the operations manual, to be carried in the aircraft to which the data applies.

New material is indicated by black brackets.

Remove and destroy the following pages:	Insert in lieu thereof the following pages:
v and vi	v and vi
15 and 16	15 through 16–1

Roy Keeley

ROY KEELEY,
Director, Office of Flight Operations and Airworthiness.

Applicability and Definitions

	Section	Page
Applicability of this part	40.1	
Applicability of Parts 43 and 60 of this subchapter	40.2	
Definitions	40.5	

Certification Rules and Operations Specifications Requirements

Certificate required	40.10	
Contents of certificate	40.11	
Application for certificate	40.12	
Application for air carrier operating certificate (*CAA rules which apply to sec. 40.12*)	40.12-1	1
Issuance of certificate	40.13	
Amendment of certificate	40.14	
Display of certificate	40.15	
Duration of certificate	40.16	
Transferability of certificate	40.17	
Operations specifications required	40.18	
Original issuance and amendment of operations specifications (*CAA rules which apply to sec. 40.18 (a)*)	40.18-1	6
Form of application for issuance of initial or revised Operations Specifications, Aircraft Maintenance (*CAA rules which apply to sec. 40.17 (a)*)	40.18-2	6
Form of application for issuance of initial or revised Operations Specifications, Aircraft Weight and Balance Control (*CAA rules which apply to sec. 40.18 (a)*)	40.18-3	7
Policies, procedures, and limitations governing issuance and amendment of Operations Specifications, Aircraft Maintenance (*CAA policies which apply to sec. 40.18 (a)*)	40.18-4	7
Contents of specifications	40.19	
Content of operations specifications, aircraft maintenance (*CAA policies which apply to sec. 40.19 (e)*)	40.19-1	9
Content of operations specifications, aircraft weight and balance control (*CAA policies which apply to sec. 40.19 (f)*)	40.19-2	10
Utilization of operations specifications	40.20	
Amendment of operations specifications	40.21	
Inspection authority	40.22	
Operations and maintenance base and office	40.23	

Requirements for Services and Facilities

Route requirements; demonstration of competence	40.30	
Route requirements; demonstration of competence (*CAA policies which apply to sec. 40.30*)	40.30-1	10
Proving flight requirements (*CAA policies which apply to sec. 40.30*)	40.20-2	10
Width of routes	40.31	
IFR routes outside of control areas	40.32	
Airports	40.33	
Airports (*CAA policies which apply to sec. 40.33*)	40.33-1	11
Communications facilities	40.34	
Communications facilities required for air route traffic control (*CAA policies which apply to sec. 40.34 (b)*)	40.34-1	11
Weather reporting facilities	40.35	
En route navigational facilities	40.36	

Requirements for Services and Facilities—Continued

	Section	Page
Servicing and maintenance facilities	40.37	
Servicing and maintenance facilities (*CAA policies which apply to sec. 40.37*)	40.37–1	12
Location of dispatch centers	40.38	

Manual Requirements

Preparation of manual	40.50	
Contents of manual	40.51	
Contents of manual: methods and procedures for maintaining weight and balance control (*CAA policies which apply to sec. 40.51 (a) (19)*)	40.51–1	12
[Contents of manual (*CAA interpretations which apply to sec. 40.51 (a) (8)*)	40.51–2]	16
Distribution of manual	40.52	

Airplane Requirements

General	40.60	
Airplane certification requirements	40.61	
Airplane limitation for type of route	40.62	
Proving tests	40.63	
Materially altered in design (*CAA interpretations which apply to sec. 40.63 (b) (1)*)	40.63–1	16

Airplane Performance Operating Limitations; Transport Category

Transport category airplane operating limitations	40.70	
Deviations (*CAA rules which apply to sec. 40.70 (a)*)	40.70–1	16
Accuracy of data (*CAA policies which apply to sec. 40.70 (b)*)	40.70–2	16
Temperature accountability (*CAA policies which apply to sec. 40.70 (c)*)	40.70–3	16
Weight limitations	40.71	
Weight limitations (*CAA policies which apply to sec. 4071*)	40.71–1	17
Take off limitations to provide for engine failure	40.72	
Takeoff limitations to provide for engine failure (*CAA policies which apply to sec. 40.72*)	40.72–1	17
En route limitations; all engines operating	40.73	
En route limitations; one engine inoperative	40.74	
En route limitations; two engines inoperative	40.75	
Special en route limitations	40.76	
Special en route limitations (*CAA policies which apply to sec. 40.76*)	40.76–1	20
Landing distance limitations; airport of destination	40.77	
Landing distance limitations; airport of destination (*CAA policies which apply to sec. 40.77*)	40.77–1	20
Landing distance limitations; alternate airports	40.78	

Airplane Performance Operating Limitations; Nontransport Category

Nontransport category airplane operating limitations	40.90	
Performance data (*CAA rules which apply to sec. 40.90*)	40.90–1	21
Takeoff limitations	40.91	
Takeoff limitations (*CAA rules which apply to sec. 40.91*)	40.91–1	21
Takeoff limitations (*CAA policies which apply to sec. 40.91*)	40.91–2	21
En route limitations; one engine inoperative	40.92	
En route limitations (*CAA rules which apply to sec. 40.92*)	40.92–1	22
Landing distance limitations; airport of intended destination	40.93	
Landing distance limitations (*CAA rules which apply to sec. 40.93*)	40.93–1	22
Landing distance limitations: airport of destination (*CAA policies which apply to sec. 40.93 (a)*)	40.93–2	22

articles carried on board by the passenger. If such articles are not weighed, the estimated weight is to be accounted for. The actual passenger weight may also be determined by asking each passenger his weight and adding thereto a predetermined constant to provide for handcarried articles and also to cover possible seasonal effect upon passenger weight due to variance in clothing weight. This constant may be approved for an air carrier on the basis of a detailed study conducted by the operator over the particular routes involved and during the extreme seasons when applicable.

(2) *Average passenger weight.* An average weight of 160 pounds (summer) may be used for each adult passenger during the calendar period of May 1 through October 31.

An average weight of 165 pounds (winter) may be used for each adult passenger during the calendar period from November 1 through April 30.

An average weight of 80 pounds may be used for children between the ages of 3 and 12. Children above 12 years of age are classified as adults for the purpose of weight and balance computations. Children less than 3 years old are considered "babes in arms."

The average passenger weight includes minor items normally carried by a passenger.

(3) *Nonstandard weight groups of passengers.* The average passenger weight method will not be used in the case of flights carrying large groups of passengers whose average weight obviously does not conform with the normal standard weight. Actual weights will be used when a passenger load consists to a large extent of athletic squads or other special group which is smaller or larger than the U. S. average. Where such a group forms only a part of the total passenger load, the actual weights may be used for such group and average weights used for the balance of the passenger load. In such instances, a notation will be made on the load manifest, indicating number of persons in the special group and identifying the group (i. e. football squad, Blank Nationals, etc.).

(f) *Crew weight.* The actual weight of crew members may be used or the following approved average weights may be utilized:

(1) Male cabin attendants 150 pounds; female cabin attendants 130 pounds.

(2) All other crew members 170 pounds.

(g) *Passenger and crew baggage.* Procedures should be provided so that all baggage, including that carried on board by the passengers, is properly accounted for. If desired by the air carrier, a standard crew baggage weight may be used.

(h) *Center of gravity travel during flight.* The air carrier will show that the procedures fully account for the extreme variations in center of gravity travel during flight caused by all or any combination of the following variables:

(1) The movement of a number of passengers and cabin attendants equal to the placarded capacity of the lounges or lavatories from their normal position in the aircraft cabin to such lounge or lavatory. If the capacity of such compartment is one, the movement of either one passenger or one cabin attendant, whichever most adversely affects the CG condition will be considered. When the capacity of the lavatory or lounge is two or more, the movement of that number of passengers or cabin attendants from positions evenly distributed throughout the aircraft may be used. Where seats are blocked off, the movement of passengers and/or cabin attendants evenly distributed throughout only the actual loaded section of the aircraft will be used. The extreme movements of the cabin attendants carrying out their assigned duties within the cabin will be considered. The various conditions will be combined in such a manner that the most adverse effect on the CG will be obtained and so accounted for in the development of the loading schedule to assure the aircraft being loaded within the approved limits at all times during flight.

(2) *Landing gear retraction.* Possible change in CG position due to landing gear retraction will be investigated and results accounted for.

(3) *Fuel.* The effect on the CG travel of the aircraft during flight due to fuel used down to the required reserve fuel or to an acceptable minimum reserve fuel established by the air carrier will be accounted for.

(i) *Fuel allowance for taxiing and runup.* The weight and balance system may provide
