ORDER

U.S. DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION

WESTERN-PACIFIC REGION

WP 1370.6A

5/21/85

SUBJ: WESTERN-PACIFIC REGION INFORMATION RESOURCE MANAGEMENT PLAN (WP-IRMP)

1. PURPOSE. This order documents the Western-Pacific Region's plan for information resource management.

2. DISTRIBUTION. This order is distributed to Section level in regional headquarters, with limited distribution to all field offices and facilities in the Western-Pacific Region.

3. CANCELLATION. Order WP 1370.6, Western-Pacific Region Information Resource Management Plan (WP-IRMP), dated 11/9/84 is cancelled.

4. BACKGROUND. Upon publication of the FAA's Information Resource Management Plan (IRMP) in August, 1983, the agency embarked upon a long term effort to effectively manage information as an agency resource. The various task forces, representing all facets of the agency, identified in detail the information needs of the present and identifiable future. Systems were identified to bring this information together, and the systems were published in the IRMP.

5. RELATIONSHIP OF WP-IRMP TO IRMP. The Western-Pacific Information Resource Management Plan (WP-IRMP) adopts by reference the content and scope of the FAA's national IRMP. The intent of the WP-IRMP is to provide regional organization and action planning required to fully implement the IRMP in the Western-Pacific Region. The WP-IRMP is a changing document which must necessarily be revised frequently to accommodate new or changing information requirements, technology advances, shifts in agency or department direction, and changes in user organizations, requirements, equipment, software, data communications, etc.

6. POLICIES.

a. Regional information systems will mesh wherever possible with national information systems.

b. Networking of information, and equipment capability to do this compatibly, is a prime objective which will be met wherever possible.

c. Information shall be captured once, and used by all those who have demonstrated need for it through common data base techniques.

d. System users will be largely responsible for the development of their own information systems in conjunction and coordination with the Information Resource Manager (IRM).

e. Planning for new requirements will be accomplished as early as possible to assure appropriate estimates are developed and included in the budget process.

Distribution: A-X-4; A-FOF-0 (LTD)

Initiated By: AWP-60

7. RESPONSIBILITIES.

a. Information Resource Manager (IRM). The IRM is the individual designated by the Regional Director to be the focal point for information resource management in the region. The IRM's duties and responsibilities are fully outlined in Order FAA Order 1370.52B, "Information Resources Management - Policies and Procedures." In summary, the IRM must be aware of and knowledgeable regarding all regional activities which fall within the IRMP. The IRM is accountable for approving the acquisition of information processing equipment in the region, and represents the region at meetings of the agency IRM Council.

b. Information Resource Management Representatives (IRMRs). The IRMRs are individuals designated by each Staff and Division Manager to represent his/her organization in all matters of information resource management. This is an important role, and requires significant amounts of information gathering, close coordination, and research if the regional elements are to be effectively represented. The IRMRs must be aware of and knowledgeable regarding all activities within the WP-IRMP. All such activities must be coordinated with the IRM to assure maximum benefits and service result from regional system development, equipment acquisitions, and the related aspects of maintenance, training and technical assistance. A list of Regional IRM Representatives is included in this order as Appendix 5.

8. SYSTEMS. The region must meet a national requirement that all information systems be identified and reported promptly to national Information Resource Management Program Office (IRMPO) for inclusion in the national plan. This responsibility devolves through the IRM to the IRMRs to report all planned systems or systems under development to the IRM. This requirement does not include unique systems which are used by only one individual on a stand-alone personal computer. Appendix 1 to this plan lists all national and regional information systems, both planned and in place, and shows the current implementation status. Appendix 4 outlines the regional involvement in the systems published in the national IRMP.

9. EQUIPMENT. The region must meet a national requirement (GSA) that all information processing equipment be identified and entered promptly into the automated system which records and tracks all such equipment use in the agency. This responsibility also devolves through the IRM to the IRMRs and requires the IRMRs to report promptly information on all new information processing equipment acquisitions to the IRM. Appendix 2 provides a current listing of this equipment and the scope of information required.

10. SOFTWARE. Acquisition and management of software is an equally important function of information resource management in the region. The licensing and use of software must be carefully monitored to assure the region does not become involved in software actions which violate the proprietary interests of the vendors. This responsibility also devolves through the IRM to the IRMRs, and requires the IRMRs to report promptly information on all new software acquisitions to the IRM. Appendix 3 provides a current listing of regional software and describes the software capability and its applicability for use on various equipment.

11. NETWORKING. The region is committed to the evolvement of networking capability throughout the region and with other agency and departmental offices. Through this means true information sharing may be made possible. As each new system is

developed, at any level, earnest consideration shall be given to the need for and requirements of effective networking techniques. These considerations shall be brought to the attention of the IRM who in turn will provide technical assistance in resolving problems and establishing effective networking techniques.

12. OFFICE AUTOMATION. Office Automation covers a wide variety of automation tools and techniques that are not specific to a particular information area. OA represents the application of automation techniques for improving productivity in typical office settings.

a. Office Automation covers tasks such as:

(1) Document/Word processing

(2) Automated spelling checkers and dictionaries

(3) Electronic filing

(4) Electronic mail

(5) Electronic calendaring and scheduling

(6) Electronic phone messaging

(7) Electronic reminders/ticklers

(8) Electronic spread sheets

(9) Forms Management

(10) Source data entry and editing

b. The key element in addressing the implementation of Office Automation will be to view the potentials for improvements from a regional perspective, looking across organizational, functional, and project lines. More specifically the approach calls for:

(1) Assessing and acting on the cost vs benefits of automation versus not automating.

(2) Using existing equipment, software and common data bases to support improvements to the extent possible.

(3) Providing a central support group (i.e., Resource Center) to make more effective and intensive use of existing or planned equipment and software needed for national and regional applications.

(4) Providing the mechanism for user group meetings to encourage balance between innovation/standardization to insure maximum benefits for the entire region.

c. The goals of office automation are simply stated:

(1) Provide each manager and organization with the tools necessary to improve personal and organizational productivity and effectiveness.

(2) Provide a mechanism whereby the cost of equipment, software and services are kept to an effective level by insuring compatibibility and maximum utilization.

(3) Implement an approved Comprehensive Office Automation plan across all of the Western-Pacific Region.

d. FY-85 Objectives.

(1) Install and initiate approved Executive Management Information System (EMIS) in AWP Regional Office Division and Staff Manager Offices.

(2) Complete the planning and approval processes for the extension of this same technology to the rest of the Regional Office and the field.

e. The return on the investment in office automation tools is directly related to productivity improvement. The time it will take the work force to perform their office functions, conduct training, retrieve and update documents, for example, will be markedly reduced by the proposed implementation presented here.

f. Organizational Impacts. The organizational impact of office automation could be extensive. The equipment and software delivered through the office automation program have the potential for redistributing workload in different ways. There will be two primary areas of impact:

(1) Many of the tools made available under this program area have major productivity benefits, which translate into fewer people doing specific work. In most cases, these productivity benefits will permit people to do different work more effectively.

(2) There will be a demand for new skills. Computer skills will have to be brought into the work responsibility area of each affected employee. Automated data processing (ADP) training will therefore be mandatory.

13. DECISION SUPPORT SYSTEMS. Decision Support Systems cover a wide variety of automation tools and techniques that are specific to a particular information area. It represents the ADP support across functional and organizational lines in performing such tasks as:

- Data Base Management Systems
- Data Resource Dictionaries/Directories
- Project Tracking Support Systems
- Computer Supported Graphics Systems

- Financial Modeling

- Statistical Analysis.

a. Approach to Implementation. The key element in addressing the implementation of Decision Support Systems will be to view the potentials for improvements from a regional perspective, looking across organizational, functional, and project lines. More specifically, the approach calls for:

(1) Providing a common Regional Data Base of the most needed data elements and create standard "gateways" and procedures for access on an as required basis.

(2) Using existing equipment, software and common data bases to support improvements to the extent possible.

(3) Providing a central support group (i.e., Information Center) to make more effective and intense use of existing or planned equipment and software needed for national and regional applications.

b. Goals. The goals of Decision Support Systems are simply stated:

(1) Provide each manager and organization with those automation tools which provide ready access to management information and improve personal and organizational effectiveness.

(2) Provide a mechanism whereby the cost of equipment, software and services are kept to an appropriate level by insuring compatibility and maximum utilization.

(3) Implement approved Comprehensive Decision Support Systems across all of the Western Pacific Region using Data Base technologies and user maintenance philosophies.

c. FY-85 Objectives.

(1) Install and initiate use of Data Base access software on current available Regional Data Bases.

(2) Begin and complete the planning and approval processes for identification of "region critical" data elements for Regional Office and the field.

d. The return on the investment in Decision Support Systems tools is directly related to productivity improvement. The time it will take the work force to perform their management functions, retrieve and update data, and prepare management reports, for example, will be markedly reduced by the proposed implementation presented here.

e. The organizational impact of Decision Support Systems could also be extensive. The equipment and software delivered through this decision support program have the potential for redistributing workload in different ways. However,

organizational management officials at every level will be better equipped to perform their functions, and thus have the potential to be more effective and more accountable for results.

H. C. McCLURE
Director
