CHANGE

DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION

4630.2A CHG 1

9/16/89

SUBJ: STANDARD ALLOWANCE OF SUPPLIES AND WORKING EQUIPMENT FOR NATIONAL AIRSPACE SYSTEM FACILITIES

1. PURPOSE. This change provides a current listing of supplies and working equipment for radio communications link (RCL) facilities.

2. DISTRIBUTION. This change is distributed to the branch level in the Program Engineering Service, Acquisition and Materiel Service, and Systems Maintenance Service, and to director level in the Office of International Aviation, Office of Labor Relations, and Europe, Africa and Middle East Office in Washington Headquarters; to branch level in the regional Logistics divisions and section level in the Airway Facilities divisions; to branch level at the FAA Academy, FAA Depot, and Data Services Division at the Mike Monroney Aeronautical Center; to director level at the FAA Technical Center and Resident Directors (at Guam and American Samoa); and to the supervisory level at all Airway Facilities Field Offices.

3. EXPLANATION OF CHANGES. This change revises the listing of authorized supplies and working equipment in appendix 8, section 17.

4. DISPOSITION OF TRANSMITTAL. This transmittal sheet should be retained until it is superceded by a revision of the basic directive or cancelled by a new directive.

Initiated By: ASM-120

FOREWORD

This order reestablishes guidelines, delegates authority and assigns responsibilities for the management of supplies and working equipment used at National Airspace System (NAS) facilities.

Consolidated alphabetical descriptive listings are provided for Schedule "A" items, which are furnished by the FAA Depot, and Schedule "B" items, which are regionally furnished. Where applicable, National Stock Numbers (NSN) are provided.

Standard allowance listings of Schedules "A" and "B" items authorized for discrete facility types are also provided. These lists are intended to identify those items required to perform the normal range of maintenance activities at the particular type of facility involved. These lists identify item quantities, NSN (where applicable), and provide an abbreviated item description.

Any recommendations for change or improvement should be routed through appropriate channels to the Maintenance Engineering Division, APM-100, Program Engineering and Maintenance Service.

For James R. Etgen
Director, Program Engineering
and Maintenance Service

CHAPTER 1. GENERAL INFORMATION

1. PURPOSE. The purpose of this order is to consolidate and organize information required for effective management and control of FAA allowances of supplies and working equipment for National Airspace System (NAS) facilities.

2. DISTRIBUTION. This order is distributed to branch level in the Program Engineering and Maintenance Service and Acquisition and Materiel Service, and to director level in the Office of International Aviation , Office of Labor Relations, and Europe, Africa, and Middle East Office in Washington headquarters; to branch level in the regional Logistics Division and section level in the Airway Facilities Division; to branch level at the FAA Academy, FAA Depot, and Data Services Division at the Mike Monroney Aeronautical Center; to director level at the FAA Technical Center and Resident Directors (at Guam and American Samoa); and to the supervisory level at all Airway Facilities field offices.

3. CANCELLATION. Order 4630.2, Standard Allowance of Supplies and Working Equipment for National Airspace System Facilities, dated September 26, 1969 is canceled.

4. BACKGROUND. Working equipment and supplies presently authorized for field maintenance of commissioned facilities represent a significant capital investment. In addition, new facilities and equipment (F&E) are added to the system through the F&E program. This increase in facility population requires continuing acquisition of initial allowance of supplies and working equipment. Replenishment of supplies and working equipment is also required for commissioned facilities on an ongoing basis. It is essential that adequate and appropriate supplies and working equipment be furnished at the right time and place.

5. EXPLANATION OF MAJOR CHANGES.

a. The guidance portion of this directive has been partially rewritten to:

(1) Provide clarification relative to organizational responsibilities for the development and funding for Schedule "A" and Schedule "B" items for new or modernized facilities.

(2) Raise the justification threshold from five to twenty-five dollars for changed or emergency requirements.

b. The data portions of this order have been made appendices (1 through 11) to chapters 1 through 3 of the order. This new format will greatly facilitate and expedite future changes, and help facilitate their conversion to a computerized data base. Appendices 1 and 2 list Schedules "A" and "B" respectively. Appendices 4 through 11 list together those facilities which lend themselves to being conveniently grouped.

c. Price information for Schedule "A" and "B" items has been eliminated due to the need for continual updating; the inclusion of price information on individual items is not considered practical.

d. No mobile facilities are included. These are specialized items for which the FAA Depot has responsibility.

e. The following are those facilities which were changed from the previous edition of this order and the changes that were made to each:

(1) Facilities eliminated from directive: ADCOC, CTRAC, ADIS/BDIS, TTS, AFTN, WMSC, ANG, L/MF, Adcock Tower or Loop radio range, LRCO, YH, YL, FDEP, LOC (Tube Type), GS (Tube Type), UDF, UVDF.

(2) Facilities added to directive: CCMS, NATCOM, NADIN (Schedules "A" and "B" under development), ARTS II, ARTS III, ARTS IIIA, EARTS, AFSS, AIFSS, RMCF, ATBM, LDA, GDL, ODALS, PAPI, ICSS, SSALS, LLWAS, AWOS, RRH, GOES, FSDPS, BUEC, DFI, MCR, ATIS, TWEB, CD, RBDPE, RRWDS, TMLT/R/I, SRAP, FDIO, MPS, RMMS, MMS, HOST, ODAPS, ARTS IIA, CCTV, MLS, DARC, RCLT/R, CMLT/R, DMUX, NRCS, RCIU, DTE, EDPS, CBI, ELD, TIM, CLM.

(3) Facilities for which Schedules "A" and "B" were provided: TRACO, MPS, DARC, RBPM (ISM/RSM), BUEC, RRWDS (Schedule A).

(4) Facilities whose titles were changed: ILS Localizer, ILS Glide Slope, ILS Mark I Localizer, ILS Mark I Glide Slope, Locator at Middle or Outer Marker, SECRA, ARSR, CDC, CUE, UPS, R/BVDP, U/VDF.

6. DEFINITIONS. For the purpose of this order, the following definitions shall apply:

a. Supplies. Supplies are consumable-type articles or materials of personal property normally used within a period of one year or which, when placed in use, become a part of an item of equipment or real property (that is, lose their separate identity). Examples of supplies are:

(1) Building maintenance items such as: lamps, fuses, paints, cleaners, polishers, etc.

(2) Equipment maintenance items such as: lubricants, solvents, cleaning compounds for parts, sandpaper, tape, solder, lacing twine, etc.

b. Replacement Items. These are equipment-related items, allowance items, which are provided with Initial Supply Support Allowance Charts (ISSACs). The ISSAC lists those equipment-related items that have been selected for initial distribution as field stock. Included are: recurring items for which repetitive failures can be anticipated and insurance items for which demand is unpredictable, but onsite availability is essential to assure the operational continuity of the equipment. Examples of these items are electron tubes, transistors, fuses, lamps, capacitors, air filters, and belts. The acquisition of ISSAC items is covered by Order 4620.3, Initial Support for New or Modified Equipment Installations.

c. Working Equipment. Items that have been specifically identified as essential to the accomplishment of the total range of equipment/facility maintenance activities. In general, working items are of a durable nature having a useful life in excess of one year.

d. Schedule "A" Items. Items that lend themselves to efficient central supply management. They are items normally furnished on an FAA-wide basis. The FAA Depot has supply support responsibility for schedule "A" items listed in appendices to this order.

e. Schedule "B" Items. Schedule "B" items are those items that do not readily lend themselves to efficient FAA Depot supply, procurement, and distribution systems. Schedule "B" items are procured by the regions directly from General Service Administration (GSA) or by open market purchase in accordance with purchase instructions contained in Order 4650.12, Local Purchase.

f. Standard Allowance. A listing of supplies and working equipment (Schedule "A" and "B" items) approved for use at FAA facilities. The items and quantities specified in the standard allowance lists in this order are maximum, and all concerned should recognize the needs for each facility on an individual basis and obtain only those items for which a need exists. In some instances, items may be tentatively listed under Schedule "B" until a determination is made as to how subsequent replacement will be accomplished. If it is determined that the FAA Depot will be responsible for support, then a transfer of those items will be made to Schedule "A."

7. APPLICABILITY. The guidelines and procedures contained herein apply to FAA personal property in the areas of supplies and working equipment for NAS facilities. This directive governs the decisions and actions taken by the following organizations responsible for various aspects of this program:

a. Program Engineering and Maintenance Service

b. Acquisition and Materiel Service

c. Mike Monroney Aeronautical Center

d. Regions

8. INTRODUCTION. It is incumbent upon each region to satisfy functional requirements related to adequate supply support for NAS facilities. Within the purview of this regional mission is the responsibility for the initiation of appropriate action to assure timely acquisition of required working equipment and supplies for maintenance operations at existing, new, or modified NAS facilities.

9. OBJECTIVE. The objective of this directive is the effective management of supplies and working equipment in terms of acquisition, quality and capability, suitability, and timeliness as required by the NAS facility maintenance program. Particular attention should be given to the requirements of Paragraph 11, Guidelines. Prudent adherence to the guidance provided in that paragraph could significantly reduce the costs associated with facility maintenance.

10. RESPONSIBILITIES.

a. Program Engineering and Maintenance Service. The Program Engineering and Maintenance Service is responsible for:

(1) Updating chapters 1 through 3 of this order as appropriate. In coordination with the Mike Monroney Aeronautical Center, and the regions, APM-100 shall maintain the directive case file, coordinate all revisions, and initiate printing actions.

(2) Establishing standard allowance lists. In coordination with APM-100 and the regions, the program office (appropriate APM engineering division) shall develop recommended initial standard allowance listings for Schedules "A" and "B" for new facilities and additions/deletions resulting from F&E actions for existing and/or modified facilities. These listings shall be submitted to APM-100 in the format shown in figure 1-1. APM-100 shall, in turn, coordinate Schedule "A" requirements with the FAA Depot prior to updating the appropriate appendices to this order.

(3) Budgeting for supplies and working equipment. Program offices shall include in their budget submission for F&E projects, estimated funding requirements for Schedule "A" and "B" items.

(4) Funding for supplies and working equipment. Funding for Schedule "A" and "B" requirements shall be in accordance with Order 2500.8, Operations Vs F&E Funding. The appropriate program office shall initiate, in a timely manner, the transfer of funds to the Mike Monroney Aeronautical Center for Schedule "A" requirements for F&E projects under their purview. Schedule "B" funds for F&E projects shall, likewise, be furnished to the regions by the appropriate program office.

(5) Funding for prototype facilities. Funds for Schedule "A" and "B" items for prototype facilities that are incorporated into the NAS shall be furnished similiarly in accordance with paragraph 10a(4) when those facilities are taken off prototype status.

(6) Updating the appendices. Correcting, revising, adding items to or deleting items from the data base on which all the lists of Schedule "A" and "B" items are stored. This will be done as necessary in coordination with the FAA Depot. These lists are appendices 1 through 11 as noted in the table of contents of this directive.

b. Mike Monroney Aeronautical Center (FAA Depot). The FAA Depot is responsible for:

(1) Coordinating with APM-100 as required on Schedule "A" matters.

(2) Acquiring and distributing initial issues of Schedule "A" items on a timely basis when adequately funded.

(3) Budgeting for and supporting field requirements for those items identified as Schedule "A" in this order and subsequent revisions. This shall include replacement of items that are lost, stolen, destroyed, or uneconomical to repair. Also included are Schedule "A" items that are subsequently added to the standard facility allowance listings contained in this directive. APM-100 will coordinate all such additions with the FAA Depot prior to revision issuance.

(4) Determining stock requirements for Schedule "A" items where appropriate.

d. Regions

(1) Airway Facilities Divisions. The regional Airway Facilities divisions shall be responsible for:

(a) Issuing clear guidelines to field offices, holding them responsible for exercising good judgement in the application of these guidelines in conjunction with the standard allowance lists. In this respect, the maximum delegation of responsibility and commensurate authority shall be made to the lowest possible level.

(b) Initiating action to obtain initial requirements of Schedule "A" items from the FAA Depot in accordance with Order 4650.7, Management of Project Materiel. Schedule "B" items shall be obtained through local procurement, GSA, regional excesses, etc., as applicable.

(c) Budgeting for and procuring new Schedule "B" items (additions to this directive), and the replacement of Schedule "B" items for existing facilities.

(2) Sector Offices. Sector offices shall be responsible for:

(a) Determining facility working equipment requirements based on the standard allowance lists included in this order.

(b) Initiating action to recommend changes (see figure 1-2) when it becomes evident that an item included on the standard allowance lists is no longer needed or that a new or more sophisticated item could be used to more effectively perform the maintenance work at a facility. Field personnel may recommend additions, deletions, and changes to Schedule "A" lists directly through the "Depot Schedule 'A' monitor" who periodically coordinates these recommendations with APM-100. Based upon this coordination a decision is made to establish, delete, or change the Schedule "A" allowance. These changes are then disseminated to field personnel via memorandum from the FAA Depot to regional Airway Facilities and Logistics divisions. The changes are also published in the "Depot Newsletter". All recommendations to change the Schedule "A" lists are submitted to the General Materiel Section (AAC-486) on a speed memo and include complete item descriptions and quantities required as the standard allowance.

(c) Effecting proper coordination with the regional office, especially when backfitting a facility that has been previously commissioned and partial distribution of the initial allowance of working equipment has already taken place. Necessary items may be purchased locally or obtained from other sources.

(d) Acquiring replacement of standard allowance items used during installation. (Refer to chapter 2, paragraph 15 of this directive.)

11. GUIDELINES. Excess or unnecessary duplication of working equipment items at facilities shall be avoided. Site stocks of supplies shall be held at minimum levels consistent with program objectives. Before requisitioning the initial allowance of working equipment, the following precautions shall be observed.

a. Collocated facilities shall be taken into consideration when determining working equipment requirements. For example, items are duplicated on the VHF omnidirectional range (VOR) and tactical air navigation (TACAN) lists; thus, one set of items should suffice where the facilities are collocated. A standard allowance list authorizes working equipment on the basis that all possible situations of a single remote facility, having special access or other problems, can readily be provided the necessary equipment, as can those collocated in various combinations.

b. Excess working equipment, initial supply support allowance items, and administrative property available through decommissioning, etc., shall be screened against requirements in accordance with Order 4800.2, Utilization and Disposal of Excess and Surplus Personal Property.

c. Where a new facility is to be collocated with an existing facility, review shall be made of the working equipment on-hand to preclude unnecessary duplication of items.

d. All pertinent correspondence shall be reviewed for information that may indicate that the full allowance is not required at a specific location.

e. Standard allowance lists presented in this order include all items necessary to perform those maintenance functions outlined in various instructions for a specific facility. They are not a MANDATORY MINIMUM, but rather show the MAXIMUM allowance of items for a single facility type, which does not require special justification to obtain. The issuance of standard allowance lists is only broadly based on the need and desirability of standardization. It is also intended that these allowances eliminate the need for documentation required to separately justify individual items of working equipment that are a considered and recognized requirement.

f. All accountable items included in the standard allowance lists shall be reflected in the accountable records as required by Order 4650.21, Management of In-Use Personal Property

g. All items included on the standard allowance for engine generators may not be required for smaller size engines. Items not needed shall not be requisitioned.

h. Mobile facilities are not included in this order. Mobile facilities are generally equipped with a tool kit of adequate size to enable repairs to be made as necessary. It is the responsibility of the FAA Depot to assure that mobile facilities are delivered in good operable condition along with the proper tools necessary for routine maintenance and repairs.

12. CHANGED OR EMERGENCY REQUIREMENTS

a. At locations where working equipment and supplies on the standard allowance lists may be inadequate because of unusual requirements or conditions, additional equipment shall be allowed if supported by adequate justification submitted to the regional Airway Facilities division.

b. In the event of an emergency requirement for items not included on the standard allowance lists, authorization shall be obtained from the regional Airway Facilities division for local procurement. Follow-up justification shall be submitted to effect revisions to standard allowance lists to include the procured item(s).

c. The requirement for justification as outlined in paragraphs 12a and 12b above shall apply to those items costing twenty-five dollars or more.

13. PROCEDURES FOR REQUESTING ADDITIONS, DELETIONS, AND SUBSTITUTIONS.

a. Requests may be made through normal channels for additions, substitutions, or deletions of items on the Schedule "A" or Schedule "B" lists; however, this listing of items should be adhered to as closely as possible.

b. The Schedule "A" request monitor at the FAA Depot reviews each requisition before processing and will return any that are incorrect or excessive in the opinion of the monitor. Some of the most common causes for rejection listed by the FAA Depot are:

(1) Obsolete lists of items are requisitioned.

(2) Schedule "B" items are included in the requisition.

(3) Sets of tools rather than the individual items are ordered.

(4) Requisitions have not been signed by the authorizing official.

(5) Items in common with other facilities are already available at a collocated site.

c. The sample forms shown in figures 1-1 and 1-2 have been included for the convenience of the requesting offices. Additional copies should be made as necessary. An original and six copies of the applicable requisition shall be prepared and submitted through normal channels to APM-100 for processing and coordination with the FAA Depot when requisitioning items for a new type facility in the NAS.

FIGURE 1.1. SAMPLE FORM FOR REQUISITION

1. List facility name and identifier.

2. Number of facilities.

3. Recommended Schedule "A" allowance listing as follows:

4630.2A Index No. (If Applicable)	Quantity and U/I	NSN If applicable	4630.2A Item Name If applicable - otherwise furnish complete description

Any applicable notes: (e.g., at collocated sites list facilities that have common items so that description is avoided.)

4. Recommended Schedule "B" allowance listing as in paragraph 3. above.

5. Funding source for paragraphs 3. and 4. above.

FURNISH SCHEDULE A ITEMS IN ACCORDANCE WITH THE ATTACHED SCHEDULE

C-695539-LI/8510/1/A274

PART D — PERSONAL PROPERTY KEY PUNCH SOURCE DATA

FAA Form 4650-12

CHAPTER 2. REQUISITIONING OF INITIAL SUPPLIES AND WORKING EQUIPMENT

14. SPECIFIC INSTRUCTIONS. Efforts shall be made to ensure that any deficiencies are corrected prior to submission of the requisition to the FAA Depot.

a. Requisition of items not shown on the standard allowance lists shall not be submitted (Refer to appendix 2 of Order WA 4650.2, Requisitioning Depot Support Items). If items are required but not listed on the standard allowances, follow instructions contained in chapter 1, paragraph 10d(2)(b) and 12b.

b. The ordering office will submit Schedule "A" requisitions to the FAA Depot using a copy of a complete or partial Schedule "A" table contained in appendix 1 of this directive for the appropriate equipment type attached to FAA Form 4650-12, Materiel Requsition/Issue/Receipt (figure 2-1). Instruction on the use of FAA Form 4650-12 are in Order FAA 4650.7. Each table will be reviewed and those items not required will be lined out. The FAA Form 4650-12 serves as a transmittal document for the information listed below:

(1) Supply Support Code (SSC)

(2) Requisition or reference number.

(3) The following quotation: FURNISH SCHEDULE "A" ITEMS IN ACCORDANCE WITH THE ATTACHED SCHEDULE(S).

c. The FAA Depot reviews each requisition before processing and will return any that are incorrect or excessive. Some of the most common causes for rejection listed by the FAA Depot are as follows:

(1) Obsolete lists of items are requisitioned.

(2) Schedule "B" items are included in this requisition.

(3) Sets of tools rather than the individual items are ordered.

(4) Requisitions have not been signed by the authorizing official.

(5) Items in common with other facilities already available at a collocated site.

d. Typewriter and filing cabinets are included in the Schedule "B" allowance listing for programming purposes. However, these items require documentation for procurement on a case-by-case basis in accordance with chapter 3, sections 2 and 4, of Order 4620.4, Standards for Office Furniture and Equipment.

15. REPLACEMENT OF INITIAL SUPPLIES AND WORKING EQUIPMENT CONSUMED BY INSTALLATION CREWS.

a. When initial supplies and working equipment are furnished while new, modernization, relocation, or replacement F&E funded work is in progress, a physical inventory shall be taken by the installation party crew chief upon completion to determine what quantities, if any, of the initial issue of supplies and working equipment have been consumed, damaged, destroyed, or lost by the installation crew. It shall be the responsibility of the installation crew chief to assure that supplies and working equipment so consumed are requisitioned as appropriate for Schedule "A" and/or Schedule "B" items.

b. A sector-conducted inventory shall identify the initial allowance of supplies and working equipment that is to be provided under F&E appropriations but have not yet been received at the time of the joint acceptance inspection. Discrepancies so noted against items required and authorized under the standard allowance lists shall be made a part of the final joint acceptance inspection report. The sector manager shall initiate follow-up on such items with the FAA Depot for Schedule "A" items and whatever other source is involved for Schedule "B" items.

16-19. RESERVED.

CHAPTER 3. SCHEDULES "A" AND "B" WORKING EQUIPMENT

20. CONSOLIDATED LISTS. Consolidated lists of working equipment are included in appendices 1 and 2 to this order.

a. Appendix 1 is a consolidated list of Schedule "A" working equipment for all facilities. Items are listed by index number, NSN, and in alphabetical order by full name description. The list is to be used to further identify and describe standard allowance items for individual facilities.

b. Appendix 2 is a consolidated list of Schedule "B" working equipment for all facilities. Items are listed by index number, NSN, and in alphabetical order by full name description. The list is to be used to further identify and describe standard allowance items for individual facilities.

c. Appendix 3. RESERVED.

d. Appendices 4 through 11 and the sections therein are consolidated lists of Schedule "A" and "B" working equipment for each individual type of facility. Items are listed by index number, quantities of each authorized, NSN, and in alphabetical order by shortened name description. The lists are to be used to further identify and describe standard allowance items for each facility.

21. INDEX NUMBERS. The index numbers are included for internal directive use as a method of cross-reference and to eliminate lengthy item descriptions under individual facility sections.

APPENDIX 1. SCHEDULE A ITEMS LISTED BY ITEM NAME

SCHEDULE A

INDEX	N S N	ITEM NAME OR DESCRIPTIONS
00100	7290-01-025-9314	ADAPTER, HEATRAX P/N A100HG FOR HEAT GUN HG-301
00200	5120-00-277-1207	ADAPTER, REVERSIBLE RACKET, 1/4" SQUARE DRIVE FOR SOCKET WRENCHES
00300	6625-00-504-1451	ADAPTER, TEST, CONNECTS TO ITEM TO BE TESTED BY STANDARD OCTAL BASE AND SOCKET, CBS ELECTRONICS, #SH 28
